

WARPING UP LINEN:

Ingela Berntsson shares her way of warping up linen.

Use the outermost pegs so there is plenty of warp yarn for the raddling/pre-sleying.

Use two strands and keep the thread taut. Lay each new thread above the rest of the warp when going up

... and under when going down. NB! Do not cross the threads. Do not warp up more than 50 cm of the weaving width at any one time. For wider weaves, make several warps.

Make the whole warp on the same day. Tie the warp off firmly.

Make ties at the half-way point between the struts and then if several warps are to be beamed together, it is easier to check that they are being beamed evenly.
